Medicines in Juvenile Idiopathic Arthritis

[Print](#)

This booklet is aimed at parents and carers of children and young people with JIA. It is also intended for anyone with JIA who is about to take over management of their JIA themselves.

The focus of the booklet is on the medicines that are used to treat JIA, but it also contains information about what you can expect at every stage from diagnosis to ongoing long-term care. As you will learn, medicines are only one part of treatment.
